

Editorial

It is a great satisfaction to present the 24th number of *Jahr – European Journal of Bioethics*. Thanks to the following two previously established lines, the amount and variety of papers are respective again. Namely, we are happy about the confirmation and continuation of our collaboration with the Humanities Research Institute from Chung-Ang University in Seoul, South Korea, resulting again in a special section devoted to Artificial Intelligence Humanities. We are also pleased that *Jahr* has become a true platform for publishing research from diverse bioethical symposia, and in this issue, we provide the space for publication to some of the papers initially presented this year at the 5th International Transdisciplinary Symposium *Bioethics and Aporia of Psyche*.

The general section begins with the social work and public health perspective on the subjective well-being of unemployed beneficiaries of the guaranteed minimum benefit, making a convincing case for showing that the people in need should be approached individually, holistically, and interdisciplinary. The next article presents the development of bioethics and bioethics institutionalisation in the two countries of South-East Europe (the Republics of Kosovo and Albania), considering primarily legal, public-administrative, and societal aspects. The following contribution brings back the attention to the people in need and investigates a self-assessment of motivation for behavioural change in persons with an addiction problem.

As already mentioned, the additional space is given for the publication of four papers from the aforementioned conference, which are adequately presented in a special Guest Editor's Editorial. I would like to take this opportunity to thank Luka Janeš for his cooperation and enrichment of this number of *Jahr*.

As also mentioned, the additional space has been given for the publication of two papers in a new section of the *Jahr* – Artificial Intelligence Humanities: first, discussing the possibility of artificial reason, using the intellectual fruits of several philosophers (J. McCarthy, I. Kant, and A. Turing), and the second, dealing with establishing the concept of AI literacy by focusing on competence and purpose of such kind of education. I would like to thank Kyumin Moon, one of our new members of the Advisory Board, for intensive cooperation in preparing this section.

I am also pleased to see that scientific conferences, which were disturbed by the pandemic situation, slowly come back in their usual rhythm – three scientific meeting reviews are also a part of this issue.

I would like to thank the members of the Editorial Board, peer-reviewers, and all other associates included in the creation of this issue. I owe special thanks to the Executive Editor, Managing Editor, and our Language Editors for their tremendous help, but also special thanks go to the editors of the aforementioned special sections.

Enjoy reading *Jahr!*
